Research Summary

Recycled aluminum refers to aluminum that has been recovered and processed from post-consumer or post-industrial scrap. The recycling of aluminum involves collecting used aluminum products, such as beverage cans, packaging materials, or industrial scrap, and then melting and refining the material to produce new aluminum. The recycling process for aluminum is highly efficient and requires significantly less energy compared to primary aluminum production from raw bauxite ore. Recycled aluminum retains its properties and quality, making it indistinguishable from primary aluminum. Utilizing recycled aluminum in manufacturing reduces the demand for virgin materials, conserves energy, and lowers greenhouse gas emissions associated with the production of aluminum. As a result, recycled aluminum plays a vital role in promoting sustainability, resource conservation, and environmental responsibility in various industries, including packaging, construction, and transportation.

The major global manufacturers of Recycled Aluminum include Novelis, Norsk Hydro, UACJ, Constellium, Hebei Sitong New Metal Material, Matalco, Sigma Group,

Chongqing Shunbo Aluminum, Huajin Aluminum, Raffmetal, Ye Chiu, Kaiser Aluminum, Zhejiang Wantai Aluminium, Kobe Steel, Delta Aluminium Industry, etc. The global players competition landscape in this report is divided into three tiers.
