Research Summary

Recycled glass fiber refers to fibrous material derived from the recycling of used glass products, such as glass bottles or industrial glass waste. The recycling process involves collecting and cleaning the glass, which is then melted and extruded into thin fibers. These recycled glass fibers can be used as a reinforcement material in various applications, including composite materials, construction, and manufacturing processes. The use of recycled glass fiber offers environmental benefits by diverting glass waste from landfills and reducing the demand for virgin materials. Additionally, it provides a sustainable alternative to traditional fiber reinforcements, contributing to resource conservation and waste reduction in industries where fiber reinforcement is required for strength and durability.

The major global manufacturers of Recycled Glass Fiber include Rivierasca, Neocomp, Befesa, Ucomposites, Global Fiberglass Solutions, Agecko, Conenor, Filon Products, Mixt Composites Recyclables, Nittobo, Reprocover, etc. The global players competition landscape in this report is divided into three tiers.
