Research Summary

Recycled glass refers to glass that has been collected, processed, and transformed into new products instead of being disposed of as waste. The recycling process involves collecting used glass containers, such as bottles and jars, and cleaning them to remove contaminants. The cleaned glass is then crushed into small pieces, called cullet, which can be melted and molded into new glass products. Recycling glass conserves raw materials, reduces energy consumption in the manufacturing process, and minimizes the environmental impact associated with extracting and processing raw materials. Recycled glass is commonly used to produce new containers, fiberglass insulation, road construction materials, and decorative glass products. Utilizing recycled glass in manufacturing contributes to sustainability efforts by promoting resource efficiency and waste reduction in various industries.

The major global manufacturers of Recycled Glass include Strategic Materials, Ardagh, Momentum Recycling, Heritage Glass, Shanghai Yanlongji, Spring Pool, Pace Glass, Vitro Minerals, Marco Abrasives, Binder+Co, Rumpke, Owens Corning, Vetropack
