Research Summary

Recycled plastics are materials derived from the recovery and processing of post-consumer or post-industrial plastic waste. The recycling of plastics involves collecting discarded plastic products, such as containers, packaging materials, or industrial scraps, and then processing them to create new plastic materials. This process typically includes sorting, cleaning, shredding, melting, and extruding the plastic waste to form pellets or other usable forms. Recycled plastics can be utilized to manufacture a wide range of products, including packaging materials, containers, furniture, and construction materials. Recycling plastics helps reduce the demand for virgin plastic, conserves natural resources, and minimizes the environmental impact associated with plastic production. It is a crucial practice in promoting sustainability, waste reduction, and circular economy principles by extending the life cycle of plastic materials.

The major global manufacturers of Recycled Plastics include Clear Path Recycling, Clean Tech Incorporated, Mohawk Industries Incorporated, CarbonLite Industries, Envision Plastics Industries, Advanced Environmental Recycling Technologies
