### Research Summary

Recycled polyester fiber is a sustainable and eco-friendly alternative to traditional polyester fiber, produced from recycled post-consumer or post-industrial polyester waste. The recycling process involves collecting used polyester textiles, such as plastic bottles or fabric scraps, cleaning and processing them into small pieces, and then melting and extruding the material into new polyester fibers. These recycled polyester fibers can be used to create textiles for clothing, home furnishings, and various other applications. Utilizing recycled polyester contributes to reducing the environmental impact of textile production by diverting plastic waste from landfills and decreasing the reliance on virgin polyester production, which involves extracting and processing raw petrochemical materials. Recycled polyester fiber aligns with sustainable and circular economy practices, offering a closed-loop solution that promotes resource conservation and waste reduction in the textile industry.

The major global manufacturers of Recycled Polyester Fiber include Unifi, Martex Fiber, JB ECOTEX, Inocycle, Nirmal Fibres, Komal Fibers, Jiangyin Chemical Fiber, Aquafil,
