Research Summary

A reed switch is an electromagnetic switch device that consists of two thin, ferromagnetic, and flexible metal reeds encapsulated in a hermetically sealed glass tube. The reeds are positioned close to each other but do not touch under normal conditions. When a magnetic field is applied to the reed switch, it causes the reeds to attract and make contact, closing the electrical circuit. When the magnetic field is removed, the reeds spring back to their original position, opening the circuit. Reed switches are widely used in various electronic and electrical applications, such as sensors, security systems, and automotive components. Their simplicity, reliability, and ability to operate in harsh environments make them valuable for diverse applications where a non-contact switch is required.

The major global manufacturers of Reed Switch Device include OKI, Littelfuse (Hamlin), RMCIP, Standex-Meder, Nippon Aleph, HSI Sensing, Coto, PIT-RADWAR, PIC, STG, Harbin Electric Group, Zhejiang Xurui, etc. The global players competition landscape in this report is divided into three tiers.
