Research Summary

Reflective sheeting is a material with a surface designed to reflect light efficiently, making it highly visible in low-light or nighttime conditions. Commonly used for road signs, vehicle markings, and safety apparel, reflective sheeting contains microprisms or glass beads that retroreflect light back towards its source, typically headlights from vehicles. The sheeting's retroreflective properties enhance visibility and ensure that objects or surfaces are easily seen in the dark, contributing to road safety and accident prevention. Reflective sheeting comes in various colors and grades, each tailored for specific applications, and it is often constructed with durable materials to withstand outdoor exposure and maintain reflective effectiveness over time. This material plays a crucial role in enhancing the conspicuity of objects, promoting safety, and reducing the risk of accidents by making them more noticeable to drivers and pedestrians in low-visibility conditions.

The major global manufacturers of Reflective Sheeting include 3M, Avery Dennison, Nippon Carbide Industries, ATSM, ORAFOL, Jisung Corporation, Reflomax, KIWA
