Research Summary

A reflex liquid level gauge is a type of sight glass used to visually monitor the liquid level within a tank or vessel. It consists of a transparent chamber with a special glass that uses the principle of refraction to display the liquid level. The gauge is designed to provide clear visibility of the liquid's height, with the liquid on one side of the glass appearing in contrast to the background, ensuring easy reading. Reflex liquid level gauges are commonly used in industries such as chemical processing, oil and gas, and food and beverage, where accurate liquid level monitoring is critical for safe and efficient operations.
