Research Summary

A refrigerated trailer, commonly known as a reefer trailer, is a specialized type of trailer used in the transportation of temperature-sensitive goods. These trailers are equipped with an integrated refrigeration system to provide a controlled and consistent environment for perishable items during transit. Reefer trailers are widely used in the shipping and logistics industry to transport goods like fresh produce, frozen foods, pharmaceuticals, and other temperature-sensitive cargo. The refrigeration units in these trailers can be powered by the trailer's own generator set or by connecting to an external power source, ensuring that the interior temperature remains at the desired level to preserve the quality and safety of the transported goods throughout the journey. Reefer trailers play a crucial role in maintaining the cold chain integrity, enabling the safe and efficient transportation of perishable products from producers to distributors and ultimately to consumers.
