### Research Summary

A release agent is a substance applied to surfaces or molds to prevent materials from sticking to them during processes like molding, casting, or forming. It forms a barrier between the surface and the material being processed, facilitating easy removal without causing damage or deformation. Release agents are commonly used in various industries, including manufacturing, automotive, and food processing. In the context of molding, for example, release agents are sprayed or applied to molds before pouring materials like plastics, rubber, or composites. This ensures a smooth release of the finished product without adhesion to the mold. Release agents can be either solvent-based or water-based, and the choice depends on the specific application requirements and environmental considerations. Using release agents contributes to efficient production processes, extends the life of molds, and helps achieve high-quality finished products.

The major global manufacturers of Release Agent include Chem-Trend, Franklynn Industries, Henkel, AXEL, Chukyo Yushi, Marbocote, Mcgee Industries, REXCO,
