### Research Summary

Release liners are protective layers used in the manufacturing and processing of adhesive products. These liners serve as a backing material for adhesives, preventing them from prematurely sticking to unwanted surfaces during production, storage, and transportation. Release liners are commonly found in various adhesive applications such as labels, tapes, and medical products. The liners are typically made from materials like paper or film, and they are coated with a release agent that facilitates the easy removal of the adhesive product. Release liners play a crucial role in ensuring that adhesive products maintain their integrity and can be applied smoothly when needed, contributing to efficient manufacturing processes and the quality of the final products.
