### Research Summary

Remote access software is a type of technology that enables users to connect and control a computer or network from a distant location. This software facilitates remote access to files, applications, and systems, allowing users to work or troubleshoot as if they were physically present at the location of the target device. Remote access software is widely used in business environments for IT support, system administration, and collaboration among geographically dispersed teams. It typically involves features like screen sharing, file transfer, and remote desktop control. Security measures such as encryption and authentication protocols are often integrated to ensure the protection of sensitive data during remote sessions.
