Research Summary

Remote Patient Monitoring (RPM) devices are healthcare technologies designed to monitor and collect medical data from patients in their home or other remote locations. These devices often include wearable sensors, connected medical devices, and mobile applications that enable real-time tracking of vital signs, such as heart rate, blood pressure, glucose levels, and other relevant health metrics. The collected data is transmitted to healthcare providers, allowing for continuous monitoring and timely intervention in managing chronic conditions or post-acute care. RPM devices play a crucial role in enhancing patient care by providing healthcare professionals with valuable insights into a patient's health status without the need for frequent in-person visits. This technology is particularly beneficial for individuals with chronic diseases, seniors, or those recovering from surgery, enabling proactive healthcare management and improving overall patient outcomes.
