Research Summary

Rennet casein is a type of casein protein derived from milk through the coagulation process using rennet, an enzyme complex traditionally obtained from the stomach lining of young ruminant animals. During the cheese-making process, rennet is added to milk, causing it to coagulate and form curds. These curds are then separated, and the remaining liquid is known as whey. The solid portion, containing the coagulated casein, is further processed to produce rennet casein. Rennet casein is widely used in the food industry for its functional properties, including its ability to form a strong and elastic gel when heated. It is a common ingredient in processed cheeses, bakery products, and certain dairy applications, contributing to the texture, structure, and sensory characteristics of various food items. The use of rennet casein in food products can be a consideration for those adhering to specific dietary preferences or restrictions, such as vegetarianism, as alternative coagulating agents may be used in modern cheese production.

The major global manufacturers of Rennet Casein include Fonterra, Kerry, Dairygold,
