Research Summary

Reposable trocars are medical devices used in minimally invasive surgical procedures, particularly in laparoscopic and robotic surgeries. Unlike traditional single-use trocars, reposable trocars are designed to be reusable after proper sterilization. These devices consist of a cannula or tube with a sharp pointed tip and a sleeve that facilitates the entry of surgical instruments into the body cavity. The reusability of these trocars is achieved through a design that allows for easy disassembly and thorough cleaning, followed by sterilization procedures. Repposable trocars aim to combine the advantages of reusable instruments, such as cost-effectiveness and reduced environmental impact, with the precision and safety required in minimally invasive surgeries. Healthcare professionals follow stringent protocols to ensure that reposable trocars are properly cleaned, sterilized, and maintained between uses to meet regulatory standards and ensure patient safety.
