Research Summary

Residual Current Detectors (RCDs), also known as Residual Current Devices (RCDs) or Ground Fault Circuit Interrupters (GFCIs), are safety devices used to protect against electrical hazards such as electric shock and fire. RCDs monitor the electrical current flowing through a circuit and quickly disconnect the power if they detect a difference in the current between the live and neutral conductors, indicating a leakage of current to ground. This difference, known as residual current, could occur due to faults, damaged insulation, or contact with water. By interrupting the circuit, RCDs prevent dangerous levels of electric shock and mitigate the risk of electrical fires. RCDs are commonly installed in electrical panels, sockets, and extension cords in residential, commercial, and industrial settings to enhance electrical safety.

The major global manufacturers of Residual Current Detectors include Schneider Electric, SIEMENS, ABB, EATON, Chint Group, DELIXI ELECTRIC, Legrand, Rockwell Automation, BG Electrical, LOVATO Electric, Sassin International Electric, IMO Precision Controls, Makel, Doepke, HIMEL, GEYA Electrical, Protek Electronics, Sassin
