Research Summary

Resorbable lifting threads, also known as thread lifts or PDO threads, are a non-surgical cosmetic procedure designed to lift and tighten sagging skin on the face and neck. These threads are made from biocompatible materials, often polydioxanone (PDO), which is absorbable by the body over time. During the procedure, these threads are strategically inserted into the skin using thin needles, creating a lifting effect as they elevate and support the tissues. Over several months, the body gradually absorbs the threads, stimulating collagen production in the treated areas and contributing to improved skin elasticity. Resorbable lifting threads are a popular option for individuals seeking a less invasive alternative to traditional facelifts, providing a temporary lift and rejuvenation with minimal downtime. The results are often visible immediately and continue to improve over several months as the body's natural healing processes take effect.

The major global manufacturers of Resorbable Lifting Thread include Johnson & Johnson, Medtronic, Sinclair Pharma, Croma-Pharma, Corza Medical, Aptos

International, MINT PDO, NovaThreads, PDO Max, Assut Europe, N-Finders, Dongbang Medical, IMEIK Technology, Healux, etc. The global players competition landscape in this report is divided into three tiers.
