Research Summary

Retinols, in the context of skincare, are a form of vitamin A that is commonly used in topical skincare products. Retinols belong to the family of retinoids and are considered a precursor to active forms like retinoic acid, which is known for its skin-renewing properties. Retinols are widely recognized for their ability to promote cell turnover, stimulate collagen production, and address various skin concerns such as fine lines, wrinkles, and uneven skin tone. These derivatives are often included in anti-aging skincare formulations to improve skin texture and reduce the signs of aging. While retinols can be effective, they may also cause sensitivity and irritation, so it's advisable to introduce them gradually into a skincare routine and use them with proper sun protection.

The major global manufacturers of Retinols include DSM, BASF, Zhejiang NHU, Adisseo, Zhejiang Medicine, Kingdomway, etc. The global players competition landscape in this report is divided into three tiers.
