Research Summary

Reversing cold mills are specialized rolling mills used in the metal industry for the processing of cold-rolled steel and other metal strips. Unlike traditional tandem mills, reversing cold mills have the capability to operate in both directions, allowing the metal strip to pass back and forth between the rolls. This bidirectional movement facilitates improved control over thickness reduction, surface quality, and overall precision during the cold-rolling process. The rolling stands in reversing cold mills can be adjusted to achieve specific thicknesses and surface finishes, making them versatile for producing a wide range of cold-rolled steel products with high dimensional accuracy. These mills are commonly employed in the manufacturing of automotive parts, appliances, and various industrial applications where precision and quality of cold-rolled steel are essential.

The major global manufacturers of Reversing Cold Mills include SMS Group, ANDRITZ Group, Primetals Technologies, Danieli, MINO SPA, Tenova (Techint Group), IHI Corporation, John Cockerill Group, Fagor Arrasate S.Coop., Shanghai Jingxiang, AT&M Environmental, MAS RollPro, etc. The global players competition landscape in this
