### Research Summary

RFID (Radio Frequency Identification) printers and tags form an integrated system for labeling and tracking items in various applications. RFID printers are specialized devices that combine traditional printing capabilities with RFID encoding functionality. They enable the simultaneous printing of human-readable information, barcodes, and the encoding of electronic data into RFID tags. RFID tags consist of an integrated circuit (IC) and an antenna, storing unique identifiers that can be wirelessly read by RFID readers. The combination of RFID printers and tags is widely used in inventory management, supply chain logistics, and asset tracking. This technology automates data capture processes, improving efficiency and accuracy in identifying and tracking items throughout their lifecycle.
