Research Summary

A rice production line is a series of automated processes and machinery designed to efficiently transform raw rice paddy into edible white rice or other rice products. The line typically begins with cleaning and de-stoning the paddy to remove any foreign materials, followed by drying to reduce moisture content to optimal levels for storage and milling. The paddy is then husked using a dehusker, which separates the outer shell (husk) from the grain, producing brown rice. Further processing includes milling and polishing to remove the bran layer, turning the brown rice into white rice, followed by sorting and grading based on size, shape, and quality. The final stages may involve packaging, labeling, and preparing the rice for distribution. Rice production lines can vary in complexity, from small-scale operations to large industrial systems, and are designed to maximize efficiency, reduce waste, and ensure the quality of the final product.

The major global manufacturers of Rice Production Line include Sodick Co, AIHO, NAKANISHI MFG, Zhejiang Xiangying, Nanjing Leying, Shinwa Kikai, Hitec, Beijing YANC, Xinxing Rongfu, Guangzhou XuZhong Food Machinery, etc. The global players
