Research Summary

Rifle scopes are optical devices mounted on firearms, specifically rifles, to enhance aiming accuracy and precision. These scopes consist of lenses and reticles, allowing shooters to magnify their target and improve their sight picture. Rifle scopes come in various magnification levels and lens diameters to cater to different shooting applications, such as hunting, target shooting, or long-range precision shooting. The reticles within the scope aid in aligning the firearm with the target, and many modern rifle scopes feature adjustable settings, illuminated reticles, and parallax adjustments to accommodate various shooting conditions.
