### Research Summary

Rigid endoscopes are medical devices used for visual examination and diagnostic procedures within the human body. Unlike flexible endoscopes, which can navigate through more intricate pathways, rigid endoscopes have a straight, inflexible tube with a light source and a lens system. They are commonly employed in various medical specialties, including urology, gynecology, otolaryngology, and arthroscopy. Rigid endoscopes come in different diameters and lengths, and they are inserted into natural body openings or through small incisions to provide direct visualization of internal structures. The images captured by the lens system are transmitted to an eyepiece or a video monitor for the medical practitioner to examine. Rigid endoscopes play a critical role in minimally invasive surgeries and diagnostic procedures, enabling physicians to visualize and address medical issues without the need for more invasive surgical approaches.

The major global manufacturers of Rigid Endoscopes include KARL STORZ, Stryker, Richard Wolf, Olympus, Medtronic, Conmed, Smith & Nephew, B. Braun Melsungen,
