Research Summary

A riveting machine is a mechanical device used for joining two or more components by driving a rivet through them. Rivets are fasteners that consist of a cylindrical shaft with a head on one end. In the riveting process, the machine places the rivet in a pre-drilled hole between the components to be joined. The machine then deforms the unheaded end of the rivet using pressure or impact, creating a second head and effectively clamping the components together. Riveting machines come in various types, including pneumatic, hydraulic, or mechanical, depending on the force and method employed for the rivet setting. These machines are widely used in manufacturing, construction, and other industries where a strong and durable mechanical joint is required, and welding or other methods may not be suitable or practical.

The major global manufacturers of Riveting Machine include Orbital Systems (Bombay), SM Engineers, Huenchen, MBR Automation, Jeet Machine Tools Corporation, Prash Machines, EBS Automation, Chang Lian Fa Machinery, Scube International, Sai Machine Tools, MBR Automation, Wuxi Keyi Equipment Manufacturing, Shanghai Taige Automation Equipment, Dongguan Hongbai Industrial, Dongguan Hongjie Intelligence
