Research Summary

Road inspection systems are advanced technological solutions designed for monitoring and assessing the condition of roads and transportation infrastructure. These systems often incorporate a combination of sensors, cameras, and other data collection devices mounted on specialized vehicles or drones to capture detailed information about road surfaces, signs, markings, and overall infrastructure health. The collected data is then analyzed to evaluate the condition of roads, identify potential issues such as potholes, cracks, or other defects, and assess the need for maintenance or repairs. Road inspection systems contribute to efficient and proactive road management, enabling authorities to prioritize maintenance tasks, plan infrastructure upgrades, and enhance overall road safety and functionality. Advanced technologies such as LiDAR, GPS, and computer vision play a significant role in providing accurate and comprehensive data for these inspection systems.

The major global manufacturers of Road Inspection Systems include Data Collection Limited (DCL) (ROMDAS), KURABO, ARRB Systems, International Cybernetics Co

(ICC), Dynatest, Mitsui E&S Machinery, Geophysical Survey Systems (GSSI), Roadscanners, Ricoh, Pavemetrics, ELAG Elektronik AG, Trimble, Wuhan ZOYON, Beijing Zhongtian Hengyu, etc. The global players competition landscape in this report is divided into three tiers.
