### Research Summary

Road LED traffic signals are modern traffic control devices that use light-emitting diodes (LEDs) to convey signals to motorists and pedestrians at intersections or road junctions. LED traffic signals have replaced traditional incandescent lights due to their energy efficiency, longer lifespan, and brighter illumination. These signals typically use red, yellow, and green LEDs to indicate stop, caution, and go signals, respectively. LED traffic lights are known for their quick response times, making signal changes more immediate and improving overall traffic flow. Additionally, they are more durable and require less maintenance than traditional incandescent bulbs. The adoption of LED technology in traffic signals aligns with efforts to enhance road safety, reduce energy consumption, and improve the reliability of traffic control systems in urban areas and transportation networks.

The major global manufacturers of Road LED Traffic Signals include SWARCO, Dialight, Leotek, GE Current, Fama Traffic, Traffic Technologies, Sinowatcher Technology, Anbang Electric, Econolite Group, WERMA, Jingan, Trafitronics India, etc.
