### Research Summary

A robot pool cleaner is an automated device designed to clean and maintain swimming pools efficiently and effectively. These cleaners typically consist of a self-contained unit equipped with brushes, scrubbers, vacuum suction, and filtration systems that work together to remove dirt, debris, and algae from pool surfaces, walls, and floors. Operating independently of the pool's filtration system, robot pool cleaners move systematically across the pool, guided by built-in sensors or pre-programmed algorithms, to ensure thorough coverage and cleaning. Powered by electricity and often equipped with rechargeable batteries, these devices are capable of scrubbing, vacuuming, and filtering pool water, leaving behind a clean and sparkling pool with minimal effort from the user. Robot pool cleaners offer convenience, time savings, and improved water quality, making them a popular choice for pool owners seeking hassle-free maintenance solutions.
