### Research Summary

A robot teach pendant is a handheld device used to manually control and program industrial robots. It serves as the interface between the operator and the robot, allowing the user to guide the robot through specific movements or 'teach' it a series of tasks. The teach pendant typically features a display screen, buttons, and joysticks or a touchpad, enabling users to input commands, adjust settings, and modify the robot's actions. It allows operators to move the robot's arm to predefined positions in space and record these positions as waypoints in the robot's program. This device is essential in the initial setup, calibration, and ongoing operation of robotic systems in manufacturing, assembly, or other automation applications, offering flexibility and ease of use for programming without the need for complex coding.
