Research Summary

A robotic scope holder is a device used in medical and surgical procedures to precisely position and hold an endoscope or surgical camera. It consists of a robotic arm system with multiple degrees of freedom that can be controlled by a surgeon or an assistant. The robotic scope holder securely grips the endoscope or camera and allows for smooth and precise movement in multiple directions, including rotation, tilting, and translation. This enables the operator to adjust the position and orientation of the endoscope or camera with high accuracy during procedures such as laparoscopic surgery, endoscopy, or robotic-assisted surgery. Robotic scope holders enhance surgical precision, reduce fatigue for the operator, and provide a stable platform for optimal visualization, ultimately improving patient outcomes and safety. They are an integral part of modern minimally invasive surgical systems, allowing surgeons to perform complex procedures with greater ease and efficiency.

The major global manufacturers of Robotic Scope Holder include AKTORmed GmbH, Stryker, FreeHand Surgeon Robotic, AKTORmed, Micromed Medizintechnik, Hayden
