Research Summary

A roll bond evaporator is a type of heat exchanger commonly used in refrigeration and air conditioning systems for cooling purposes. It consists of two thin metal plates joined together by a process of roll bonding, creating a series of channels or passages for the circulation of refrigerant. One plate typically acts as the evaporator surface where the refrigerant absorbs heat from the surrounding air or fluid, while the other plate serves as a support structure. The roll bond construction allows for efficient heat transfer between the refrigerant and the surrounding medium, leading to effective cooling performance. Roll bond evaporators are known for their compact size, lightweight design, and cost-effectiveness, making them suitable for various applications where space and weight constraints are important considerations.

The major global manufacturers of Roll Bond Evaporator include Kelong Group, Changzhou Changfa Refrigeration Technology, Jiangsu Changzheng Group, CGA, Rubanox, Fengrun Group, Korel, BMR HVAC, Bundy Refrigeration, Ningbo NingZheng Aluminium Industry, Changzhou Xinxin Refrigerating Equipment, Zhongshan Huaxiang,
