Research Summary

A roller hearth kiln is a type of industrial furnace used for the continuous firing of ceramic products such as tiles, bricks, and pottery. It consists of a long, tunnel-like chamber with a series of rotating rollers or hearths that transport the ceramic products through the kiln. The products are loaded onto the rollers at one end of the kiln and gradually move through various heating zones, where they are subjected to controlled temperature profiles to achieve the desired firing or curing process. Roller hearth kilns offer advantages such as uniform heating, high throughput, and energy efficiency compared to batch kilns, making them well-suited for large-scale production environments. These kilns are commonly used in ceramic manufacturing facilities, brickworks, and other industries requiring continuous and consistent thermal processing of ceramic products.

The major global manufacturers of Roller Hearth Kiln include Noritake, NGK Insulators, ONEJOON, SACMI, German Kiln Technology, Nutec Bickley, Riedhammer GmbH, Bosio Proizvodno, Kiln & Machineries, Therser, Tokai Konetsu Kogyo, Allied Kiln
