Research Summary

Rolling dies, also known as thread rolling dies or cold forming dies, are precision tools used in the manufacturing process to produce threads on cylindrical workpieces. These dies are typically made of hardened tool steel and feature specially designed grooves or threads that impart the desired thread profile onto the workpiece through a cold forming process. During the operation, the rolling dies are pressed against the workpiece under high pressure, displacing the material to form the thread shape without removing any material. This process offers advantages such as increased strength, improved surface finish, and higher production rates compared to traditional cutting methods. Rolling dies are commonly used in industries such as automotive, aerospace, and construction for producing threaded fasteners, bolts, screws, and other components requiring precise and durable threading.

The major global manufacturers of Rolling Dies include OSG, Profiroll Technologies, TAIYA RDP Mould, CJWinter Machine Technologies, Union Tool, Rollwalztechnik, Form G Tech, Plan-E-Tech Industries, YAMAWA MFG, Heroslam S.A.L, Ningbo Henghui Thread Tools, Rolling Tools, Landis Solutions, Stefan Hertweck, Precision Tool Group
