Research Summary

Roof insulation refers to the material installed within the roofing assembly to reduce heat transfer and improve energy efficiency within a building. It is typically placed between the roof decking and the outermost roofing material, serving as a thermal barrier that helps regulate indoor temperatures and minimize heat gain or loss through the roof. Common types of roof insulation include fiberglass batts, foam boards, spray foam, and cellulose insulation, each offering specific R-values and installation methods to meet the desired thermal performance requirements. Roof insulation helps maintain comfortable interior temperatures, reduces energy consumption for heating and cooling, and enhances overall building comfort and energy efficiency. Additionally, it can contribute to soundproofing, moisture control, and extending the lifespan of the roofing system by reducing thermal stress and preventing condensation buildup within the roof assembly.

The major global manufacturers of Roof Insulation include BASF, ROCKWOOL, Johns Manville, Paroc, Kingspan, Saint-Gobain, Knauf Insulation, Owens Corning, GAF,

Jiangsu Wonewsun, Asia Cuanon, etc. The global players competition landscape in this report is divided into three tiers.
