### Research Summary

Rotary limit switches (RLS) are electromechanical devices designed to monitor and control the rotational movement of machinery or equipment within predetermined limits. Typically consisting of a rotating shaft and cam mechanism, RLSs are mounted on rotating machinery and equipped with electrical contacts that are actuated by the movement of the cam. When the machinery reaches a specified rotational angle, the cam triggers the contacts, signaling the switch to change its state, which can be used to control various functions such as stopping the rotation, activating alarms, or initiating other operations. Rotary limit switches are commonly used in industrial applications such as cranes, conveyor systems, and machine tools to ensure safe and efficient operation by preventing overtravel or undertravel of moving components, protecting equipment from damage, and enhancing overall system reliability and safety.

The major global manufacturers of Rotary Limit Switches (RLS) include Stromag, Tecno Elettrica Ravasi (TER), AMETEK STC, Gleason Reel (Hubbell), Giovenzana, B-Command, BeiLiang, Micronor (Photon Control), etc. The global players competition
