### Research Summary

rTMS (repetitive transcranial magnetic stimulation) stimulation machines are non-invasive medical devices used to treat various neurological and psychiatric disorders by delivering magnetic pulses to specific regions of the brain. These machines consist of a coil that generates magnetic fields and is positioned over the scalp of the patient. When activated, the coil emits repetitive pulses of magnetic energy, which penetrate the skull and induce electrical currents in the underlying brain tissue. rTMS stimulation machines are used to modulate neural activity, with different frequencies and intensities tailored to target different brain regions and conditions. They are commonly used in the treatment of major depressive disorder, anxiety disorders, and certain types of chronic pain, offering a promising alternative or adjunct therapy for patients who do not respond to traditional treatments or medications.

The major global manufacturers of rTMS Stimulation Machines include Yiruide, Neuronetics, Magstim, MagVenture, Neurosoft, Brainsway, eNeura, Remed, Nexstim, MAG & More, Jiangxi Brain Modulate, Nanjing Vishee Medical Technology, Shenzhen
