Research Summary

Rubber anti-tack agents, also known as anti-adhesive agents or detackifiers, are additives used in rubber processing to prevent freshly mixed rubber compounds from sticking to each other or to processing equipment during manufacturing and storage. These agents are typically applied as powders, liquids, or dispersions onto the surface of rubber compounds or processing equipment to create a thin barrier layer that inhibits the adhesion of rubber surfaces. By reducing tackiness and sticking, rubber anti-tack agents improve processing efficiency, reduce equipment downtime, and prevent product defects such as surface blemishes or handling difficulties. Common types of rubber anti-tack agents include fatty acid derivatives, stearates, waxes, silicones, and talc-based compounds, each offering specific benefits and compatibility with different rubber formulations and processing methods. The selection and dosage of anti-tack agents depend on factors such as the type of rubber, processing conditions, desired level of tack reduction, and regulatory requirements, with careful consideration given to achieving optimal performance and product quality.

The major global manufacturers of Rubber Anti-Tack Agents include Polymer Solutions Group (SASCO), Blachford, Lanxess, Kettlitz-Chemie, Barbe Group, Lion Specialty Chemicals, Struktol, King Industries, Ocean Chemical, PT.
