Research Summary

Rubber antioxidants are chemicals added to rubber formulations to inhibit or delay the degradation of rubber materials caused by oxidation, heat, and environmental factors such as ozone and UV radiation. These antioxidants work by scavenging free radicals and other reactive oxygen species, which can initiate and propagate the degradation reactions in rubber. By preventing or slowing down oxidation processes, rubber antioxidants help to maintain the integrity, flexibility, and durability of rubber products over time, extending their service life and reducing the risk of premature failure. Common types of rubber antioxidants include phenolic antioxidants, amine antioxidants, and phosphite antioxidants, each offering specific advantages and compatibility with different rubber formulations. The selection and dosage of rubber antioxidants depend on factors such as the type of rubber, processing conditions, application requirements, and environmental exposure, with careful consideration given to achieving optimal performance and longevity of the rubber product.

The major global manufacturers of Rubber Antioxidant include Eastman, Kumho

Petrochemical, Lanxess, Agrofert(Duslo), NOCIL, Dynasol?General Quimica?, Ouchi Shinko Chemical, Sennics, XiangYu-Chem, Kemai Chemical, Sunsine, NCIC, etc. The global players competition landscape in this report is divided into three tiers.
