### Research Summary

A rubber internal mixer, also known as a rubber kneader or rubber banbury mixer, is a specialized industrial machine used in the production of rubber compounds. It consists of a large, cylindrical mixing chamber equipped with two counter-rotating, sigma-shaped mixing blades or rotors. The rubber compound ingredients, including raw rubber or elastomers, fillers, additives, and curing agents, are loaded into the mixing chamber, where they are intensely mixed, sheared, and kneaded by the rotating blades. This process facilitates the dispersion of additives, uniform blending of ingredients, and distribution of reinforcing agents throughout the rubber matrix, ensuring consistent quality and properties in the final rubber compound. Rubber internal mixers are crucial in rubber processing industries such as tire manufacturing, automotive components, and industrial rubber goods, providing efficient mixing and homogenization of materials to meet stringent performance and quality standards.

The major global manufacturers of Rubber-internal Mixer include HF Group, KOBE STEEL, Comerio Ercole SPA, Dalian Rubber and Plastics, Yiyang Rubber and Plastics,
