Research Summary

Rubber tracks are continuous bands made from a durable rubber compound that are used in place of traditional metal tracks on vehicles such as excavators, skid steers, and other heavy machinery. These tracks are designed to provide superior traction, stability, and weight distribution on soft or uneven surfaces like mud, snow, or gravel, making them ideal for use in construction, agriculture, forestry, and landscaping. Unlike steel tracks, rubber tracks are quieter, produce less ground damage, and offer a smoother ride, reducing vibrations for operators. They are also lighter and more flexible, which can lead to improved fuel efficiency and reduced wear and tear on equipment. Rubber tracks are available in various sizes and tread patterns to suit different types of machinery and specific operational needs, offering versatility and enhanced performance across a wide range of environments.

The major global manufacturers of Rubber Tracks include Camso (Michelin), Bridgestone Industrial Ltd., Soucy, Trackman by Loc, McLaren Industries, Mattracks Inc, DRB Holding Co., Ltd., USCO SpA, Chermack Machine Inc., VemaTRACK, Astrak,
