Research Summary

Rumen bypass fat, also known as rumen-protected fat or bypass lipid, is a nutritional supplement used in ruminant animal diets to increase energy intake and improve milk production, reproductive performance, and overall animal health. It is specifically designed to bypass microbial fermentation in the rumen, where fats would normally be broken down, and instead deliver fatty acids directly to the lower gastrointestinal tract for absorption. Rumen bypass fat is typically made by coating or encapsulating fats with substances such as hydrogenated vegetable oils, calcium salts, or proteins to protect them from rumen degradation. This process allows for a higher proportion of fatty acids to reach the small intestine intact, where they can be absorbed and utilized by the animal for energy and other metabolic functions. Rumen bypass fat supplementation is particularly beneficial in high-producing dairy cows and other ruminant species during periods of increased energy demand or when dietary fat absorption is limited.

The major global manufacturers of Rumen Bypass Fat include Volac Wilmar, Berg +Schmidt, Arm & Hammer, Wawasan, Premium, ADM, AAK, Trident Animal Feeds,
