Research Summary

Rumen-protected amino acids are nutritional supplements used in ruminant animal diets to ensure adequate intake of essential amino acids, the building blocks of proteins, which are crucial for growth, reproduction, and overall animal health. These amino acids are coated or encapsulated to protect them from degradation in the rumen, where microbial fermentation can break down dietary proteins into ammonia and other compounds, making them less available for absorption in the small intestine. By bypassing rumen degradation and delivering amino acids directly to the lower gastrointestinal tract, rumen-protected amino acids ensure a more efficient utilization of dietary protein and help meet the specific amino acid requirements of ruminant animals. This supplementation strategy is particularly important in high-producing dairy cows and other ruminant species to support milk production, growth, and reproductive performance, especially when dietary protein sources are limited or of lower quality.

The major global manufacturers of Rumen Protected Amino Acid include Evonik, Adisseo, Novus, Balchem, Ajinomoto, Kaesler Nutrition, Kemin, Vitalac, Innovad,
