Research Summary

A rupture disc, also known as a bursting disc or pressure safety disc, is a critical safety device used in industrial processes to protect equipment, systems, and personnel from overpressure situations. It is typically a thin, circular, metal disc designed to rupture or burst at a predetermined pressure threshold, allowing excess pressure to be safely relieved from a pressurized vessel or system. Rupture discs are installed in-line with piping, vessels, or equipment and act as a fail-safe mechanism to prevent catastrophic failure or damage in the event of pressure buildup beyond safe operating limits. Once ruptured, the disc releases the pressurized fluid or gas, thereby alleviating the overpressure condition and preventing potential hazards such as explosions, leaks, or equipment damage. Rupture discs are crucial components in industries such as oil and gas, chemical processing, pharmaceuticals, and manufacturing, where maintaining safe operating conditions is paramount.

The major global manufacturers of Rupture Disc include BS&B Safety Systems, Continental Disc, Fike, V-TEX, Halma, REMBE, Dalian Duta Technology, Shanghai Hua Li Safety Device, Emerson, Mersen, ZOOK, Donadon SDD, SGL Group, etc. The global
