### Research Summary

Saccharin is an artificial sweetener that is widely used as a sugar substitute in various food and beverage products. It is derived from benzoic sulfilimine, and it is about 300 to 500 times sweeter than sucrose (table sugar) on a weight basis. Saccharin is commonly used in low-calorie and sugar-free products, including diet sodas, tabletop sweeteners, baked goods, jams, and chewing gum. Despite its long history of use, saccharin has been a subject of controversy due to concerns about its safety. Early studies suggested a link between saccharin consumption and bladder cancer in laboratory rats, leading to warning labels on products containing saccharin. However, subsequent research has shown that the mechanisms of bladder cancer in rats do not apply to humans, and regulatory bodies like the FDA and the European Food Safety Authority (EFSA) have deemed saccharin safe for human consumption within established acceptable daily intake (ADI) levels. As such, saccharin remains a popular sugar substitute for those seeking to reduce their calorie intake or manage conditions like diabetes.

The major global manufacturers of Saccharin include Kaifeng Xinghua, Tianjin

Changjie, PMC Specialties, Tianjin North Food, Shanghai Fortune, Two Lions, Productos Aditivos, Salvichem, JMC, Vishnuchrome, Shree Vardayini, Aviditya Chemicals, D K, PT Bantang Alum, PT.
