### Research Summary

Safety edges are devices designed to enhance safety in various applications, particularly in automated systems and machinery. These edges are typically made of flexible materials such as rubber or foam and are installed along the edges of moving parts or potentially hazardous areas. When pressure is applied to the safety edge, it triggers a signal to stop or reverse the motion of the machinery, preventing accidents or injuries. Safety edges are commonly used in automated doors, gates, elevators, industrial machinery, and robotic systems to detect the presence of objects or people in their path. They come in different shapes, sizes, and sensitivity levels to suit different applications and safety requirements. Overall, safety edges play a critical role in safeguarding personnel and equipment in various industrial and commercial settings, ensuring compliance with safety standards and regulations.

The major global manufacturers of Safety Edges include OMRON, ABB, Mayser, ASO, BBC Bircher, PROTECO, MillerEdge, Schmersal, Haake Technik, FAAC, Pepperl+Fuchs, Tapeswitch, Rockwell Automation, Shandong Laien, SSZ GmbH, Shenzhen Bytorent, Hebei Wo Meinuo, Qingdao LCS Tech, etc. The global players
