Research Summary

Safety laser scanners are advanced sensing devices used in industrial environments to ensure the safety of personnel and machinery by detecting the presence of objects or individuals within predefined areas or zones. These scanners emit laser beams across designated areas and continuously monitor the reflections to detect any changes in the environment. When an object or person enters a restricted zone, the safety laser scanner triggers a safety response, such as stopping machinery or activating warning signals, to prevent collisions or accidents. Safety laser scanners are highly versatile and can be configured to meet specific safety requirements, including defining detection zones, adjusting scanning parameters, and integrating with other safety systems. By providing reliable and real-time detection of potential hazards, safety laser scanners help improve workplace safety, minimize the risk of accidents, and comply with safety regulations and standards in industrial settings.

The major global manufacturers of Safety Laser Scanners include SICK, Omron, Panasonic, Pepperl+Fuchs, Rockwell Automation, Leuze Electronic, Hans TURCK,
