Research Summary

Salicylic acid and alpha hydroxy acids (AHAs), such as glycolic acid and lactic acid, are commonly used in cosmetics for their exfoliating and skin-renewing properties. Salicylic acid, a beta hydroxy acid (BHA), penetrates deep into the pores to dissolve excess sebum and unclog pores, making it effective for treating acne and preventing breakouts. AHAs, on the other hand, work by gently exfoliating the surface of the skin, promoting cell turnover, and improving skin texture and tone. They can help reduce the appearance of fine lines, wrinkles, and hyperpigmentation, resulting in smoother, more radiant skin. Together, salicylic acid and AHAs are often found in various skincare products, such as cleansers, toners, serums, and peels, offering a comprehensive approach to addressing common skincare concerns and promoting healthier-looking skin. However, it's essential to use these ingredients as directed and to incorporate them gradually into a skincare routine to minimize the risk of irritation or sensitivity.
