Research Summary

Salt fog chambers, also known as salt spray chambers or salt spray testers, are specialized testing devices used to simulate the corrosive effects of salt-laden environments on various materials and coatings. These chambers create a controlled environment where a saline solution (typically sodium chloride dissolved in water) is atomized and sprayed onto test specimens under specific temperature and humidity conditions. The salt fog exposure accelerates corrosion processes, allowing manufacturers to assess the durability and corrosion resistance of materials, coatings, and surface treatments. Salt fog chambers are commonly used in industries such as automotive, aerospace, marine, and construction to evaluate the performance of products and ensure they meet quality and regulatory standards for corrosion resistance and durability.

The major global manufacturers of Salt Fog Chambers include Weiss Technik, ATLAS (AMETEK), Q-LAB, Suga Test Instruments, Ascott Analytical Equipment, Equilam, Angelantoni, VLM GmbH, Shanghai Linpin, Associated Environmental Systems (AES),
