Research Summary

Samarium is a chemical element with the symbol Sm and atomic number 62. It is a rare earth metal that belongs to the lanthanide series of the periodic table. Samarium is silvery-white in appearance and is relatively soft and malleable. It is notable for its strong paramagnetism, which makes it useful in various applications, including in the production of powerful permanent magnets known as samarium-cobalt magnets. These magnets are employed in a range of technological devices, including headphones, electric motors, and medical equipment. Samarium also finds application in nuclear reactors, as certain isotopes of samarium can absorb neutrons efficiently, making them useful in controlling nuclear reactions and in the production of nuclear energy. Additionally, samarium compounds are used in the production of specialized glass, lasers, and catalysts in organic synthesis.

The major global manufacturers of Samarium include Great Western Minerals, Baotou Hefa Rare Earth-former Baotou, China Minmetals Rare Earth-former China Minmetal, Ganzhou Chenguang Rare Earths, Guangxi Jinguang, Grirem Advanced Materials, Shanghai Yuelong Rare Earth New Materials, Jiangxi Golden Century, China Northern

Rare Earth, etc. The global players competition landscape in this report is divided into three tiers.
