Research Summary

Saw palmetto extract is derived from the fruit of the saw palmetto plant (*Serenoa repens*), a small palm native to the southeastern United States. The extract is commonly used as a dietary supplement due to its potential health benefits, particularly in supporting prostate health and managing symptoms of benign prostatic hyperplasia (BPH). Saw palmetto extract contains a variety of bioactive compounds, including fatty acids, phytosterols, and flavonoids, which are believed to have anti-inflammatory and anti-androgenic effects. These compounds may help reduce prostate inflammation, inhibit the production of dihydrotestosterone (DHT), and alleviate urinary symptoms associated with BPH, such as frequent urination, urinary urgency, and incomplete emptying of the bladder. Saw palmetto extract is available in various forms, including capsules, tablets, and liquid extracts, and is often used as a natural alternative to conventional medications for prostate health. However, more research is needed to fully understand its effectiveness and safety.
