Research Summary

Scaffolding planks are long, flat boards made from durable materials such as wood, aluminum, or steel, commonly used in construction and maintenance projects to create stable and secure platforms for workers and materials. These planks are designed to be placed horizontally across the ledgers of a scaffolding structure, providing a sturdy surface for workers to stand on while performing tasks at elevated heights. Scaffolding planks come in various lengths, widths, and thicknesses to accommodate different scaffold configurations and load requirements. They are typically equipped with anti-slip surfaces and safety features such as metal end caps or hooks to prevent slipping and ensure worker safety. Scaffolding planks are essential components of scaffolding systems, enabling efficient and safe access to elevated work areas and contributing to the overall stability and functionality of the scaffold structure.
